RESULT 2
US-09-816-028A-26
; Sequence 26, Application US/09816028A
; Patent No. US20020042369A1
; GENERAL INFORMATION:
; APPLICANT: Gilbert, Michel
; APPLICANT: Wakarchuk, Warren W.
; APPLICANT: National Research Council of Canada
; TITLE OF INVENTION: Campylobacter Glycosyltransferases for Biosynthesis of
; TITLE OF INVENTION: Gangliosides and Ganglioside Mimics
; FILE REFERENCE: 019633-000111US
; CURRENT APPLICATION NUMBER: US/09/816,028A
; CURRENT FILING DATE: 2001-03-21
; PRIOR APPLICATION NUMBER: US 60/118,213
; PRIOR FILING DATE: 1999-02-01
; PRIOR APPLICATION NUMBER: US 09/495,406
; PRIOR FILING DATE: 2000-01-31
; NUMBER OF SEQ ID NOS: 49
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 26
; LENGTH: 906
; TYPE: DNA
; ORGANISM: Campylobacter jejuni
; FEATURE:
; NAME/KEY: CDS
; LOCATION: (1)..(906)
; OTHER INFORMATION: beta-1,3-galactosyltransferase from C. jejuni strain
; OTHER INFORMATION: OH4384 (ORF 6a of lipooligosaccharide (LOS)
; OTHER INFORMATION: biosynthesis locus)
US-09-816-028A-26

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     On Jul 14, 2004 this sequence version replaced gi:50234193.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEYP-38H2
            is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    65160: contig of 65160 bp in length

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 423; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
```

CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
CC The invention relates to a nucleic acid comprising a sequence at least 18
CC bases in length of a segment of the chemically pretreated DNA of genes
CC associated with pharmacogenomics according to one of the sequences of the
CC genes ALDH6 (NM_000693), CYP11A (NM_000781), CYP11B1 (NM_000497), CYP3A3
CC (NM_000776 and NM_017460), DPYD (NM_000110), EPHX2 (NM_001979), OCLN
CC (NM_002538), TXNRD1 (NM_003330), UGT8 (NM_003360), MRP (NM_004996,
CC NM_019900, NM_019901, NM_019902, NM_019862, NM_019898, NM_019899) and
CC their complementary sequences, or a sequence (S1) chosen from 87
CC sequences and their complements. The chemical pretreatment is bisulphite
CC treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC Also included are an oligomer (II) in particular an oligonucleotide or a
CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC base sequence having a length of 9 nucleotides which hybridises to or is
CC identical to a chemically pretreated DNA of genes associated with
CC pharmacogenomics and their complements, arranged in an array for
CC analysing diseases associated with the methylation state (CpG) and/or
CC detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC and their complements is useful for diagnosis and therapy of solid
CC tumours and cancer. The present sequence represents one the 87 DNA
CC sequences or its complement. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PS   Claim 28; SEQ ID NO 155; 117pp; English.
XX
CC   The present invention describes a method for detecting and
CC   differentiating between haematopoietic cell proliferative disorders
CC   associated with at least 1 gene and/or their regulatory regions in a
CC   subject. The method comprises contacting a target nucleic acid in a
CC   biological sample obtained from the subject with at least 1 reagent,
CC   which distinguishes between methylated and non-methylated CpG
CC   dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC   represent specifically claimed nucleotide sequences from the present
CC   invention. Oligonucleotides from the present invention can be used: for
CC   differentiating between healthy haematopoietic cells and proliferative
```

CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PT Detecting and differentiating between hematopoietic cell proliferative
PT disorders, comprises contacting a target nucleic acid with a reagent that
PT distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS Claim 28; SEQ ID NO 301; 117pp; English.
XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PT   Predicting responsiveness of a subject with breast cell proliferative
PT   disorder, useful for treating or differentiating breast cell
PT   proliferative disorders comprises analyzing methylation pattern of a
PT   genomic DNA from the subject.
XX
PS   Disclosure; SEQ ID NO 687; 104pp; English.
XX
CC   The invention relates to a novel method for predicting the responsiveness
CC   of a subject with a cell proliferative disorder of the breast tissues to
CC   a therapy comprising analysing the methylation pattern of a target
CC   nucleic acid by contacting at least one of the target nucleic acids in a
CC   biological sample obtained from the subject prior to or during treatment.
CC   The method of the invention has cytostatic activity, and may have a use
CC   in gene therapy. The set of oligonucleotides comprising at least two of
CC   the oligomers are useful for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC   methods, nucleic acid, oligonucleotide, and kit are useful for the
CC   treatment, characterisation, classification and/or differentiation, of
CC   breast cell proliferative disorders. The method is also useful for
CC   predicting the responsiveness of a subject with a cell proliferative
CC   disorder of the breast tissues to a therapy. The present sequence is used
CC   in the exemplification of the invention.

XX
CC Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA
CC molecules associated with the cell cycle and specific PCR primers of the
CC invention. The sequences are useful for detecting the methylation state
CC of all CpG dinucleotides in a sequence and therefore for analysing
CC associated diseases. By analysing cytosine methylations in the pretreated
CC DNA, genetic and/or epigenetic parameters for the diagnosis and therapy
CC of existing diseases or the predisposition to specific diseases can be
CC ascertained. The parameters may be compared to another set of genetic
CC and/or epigenetic parameters, the differences serving as basis for
CC diagnosis and/or prognosis events which are disadvantageous to patients.
CC The sequences of the invention are useful for the diagnosis and therapy
CC of HIV infection, neurodegenerative disorders, graft-versus-host disease,
CC aging, glomerular disease, Lewy body disease, arthritis,
CC arteriosclerosis, solid tumours and cancers

PT cancer.
XX
PS Claim 1; SEQ ID NO 107; 32pp; English.
XX
CC The invention relates to a nucleic acid, which comprises a segment of the
CC chemically pretreated DNA of genes associated with DNA transcription from
CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC to the chemically pretreated DNA of genes associated with DNA
CC transcription. The set of oligomer probes are useful for detecting the
CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC diagnosing or treating diseases associated with DNA transcription
CC (particularly with the methylation status), e.g. adenosine deaminase
CC deficiency, viral infection, retroviral infection, Sezary syndrome,
CC haematological disorders, immunological disorders, Werner syndrome,
CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
CC neurological disorders, neurodegenerative disorders, Waardenburg
CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
CC or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
CC associated genomic DNA molecules of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification but
CC was obtained in electronic format directly from the European Patent
CC Office

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     On Aug 12, 2000 this sequence version replaced gi:8810453.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   163443: contig of 163443 bp in length.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.
Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml

            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            zfish-help@sanger.ac.uk Clone requests:
            http://www.sanger.ac.uk/Projects/D_rerio/faqs.shtml#dataeight
COMMENT     On Jun 7, 2005 this sequence version replaced gi:61673560.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            CH211-248P17 is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply.

BX284625
LOCUS       BX284625               98852 bp    DNA     linear   VRT 02-DEC-2004
DEFINITION  Zebrafish DNA sequence from clone DKEYP-55F12 in linkage group 20
            Contains the gene for a novel protein similar to vertebrate BTB
            (POZ) domain containing family and three novel genes (zgc:55404),
            complete sequence.
ACCESSION   BX284625
VERSION     BX284625.4  GI:36796643
KEYWORDS    HTG; zgc:55404.
SOURCE      Danio rerio (zebrafish)
  ORGANISM  Danio rerio

COMMENT     On Sep 27, 2003 this sequence version replaced gi:32169085.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            DKEYP-55F12 is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PS Disclosure; Page 482-484; 577pp; English.
XX
CC The present invention describes proteins and their fragments (I) encoded
CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC (II) are useful for the development of vaccines against P. falciparum
CC infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC immunogens comprising the sequences of (I), are useful in the detection
CC of infection with P. falciparum. Furthermore, (I) (especially when they
CC are rifins or secreted or membrane proteins) can aid the identification
CC of drugs to treat or prevent P. falciparum infection, or they can be used
CC to identify drug resistance in P. falciparum. Sequencing of the
CC Plasmodium chromosome 2 and the subsequent identification of proteins
CC encoded by it will help to expand our understanding of parasite biology,
CC a process hampered by the complexity of the parasitic lifecycle, and
CC provide new targets for vaccine and drug development. Parasite resistance
CC to drugs and mosquito resistance to insecticides have led to a resurgence
CC of malaria in many parts of the world, and there is a pressing need for
CC vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC represent nucleotide and protein sequences given in the present
CC invention, but which are not specifically mentioned within the
CC specification

PT   New antisense nucleic acids, useful for identifying proteins or screening
PT   for homologous nucleic acids required for cellular proliferation to
PT   isolate candidate molecules for rational drug discovery programs.
XX
PS   Claim 14; SEQ ID NO 16075; 1766pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising any one of
CC   the 6213 antisense sequences given in the specification where expression
CC   of the nucleic acid inhibits proliferation of a cell. Also included are:
CC   (1) a vector comprising a promoter operably linked to the nucleic acid
CC   encoding a polypeptide whose expression is inhibited by the antisense
CC   nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC   polypeptide or its fragment whose expression is inhibited by the
CC   antisense nucleic acid; (4) an antibody capable of specifically binding
CC   the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC   proliferation or the activity of a gene in an operon required for
CC   proliferation; (7) identifying a compound that influences the activity of
CC   the gene product or that has an activity against a biological pathway
CC   required for proliferation, or that inhibits cellular proliferation; (8)
CC   identifying a gene required for cellular proliferation or the biological
CC   pathway in which a proliferation-required gene or its gene product lies
CC   or a gene on which the test compound that inhibits proliferation of an
CC   organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC   compound's activity; (11) a culture comprising strains in which the gene
CC   product is overexpressed or underexpressed; (12) determining the extent
CC   to which each of the strains is present in a culture or collection of
CC   strains; or (13) identifying the target of a compound that inhibits the
CC   proliferation of an organism. The antisense nucleic acids are useful for
CC   identifying proteins or screening for homologous nucleic acids required
CC   for cellular proliferation to isolate candidate molecules for rational
CC   drug discovery programs, or for screening homologous nucleic acids
CC   required for proliferation in cells other than S. aureus, S. typhimurium,
CC   K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC   prokaryotic essential genes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX
PS Claim 1; SEQ ID NO 10208; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC The present invention describes a purified Anopheles gambiae olfaction
CC polypeptide comprising a 383, 394, 380, 411, 412, 391, 157 or 401 residue
CC amino acid sequence (see ABP52833 to ABP52840) (S1), a conservatively
CC modified amino acid sequence of them, or a sequence of (S1) with at least
CC 20 consecutive residues. Also described: (1) an isolated polynucleotide
CC comprising: (a) a nucleotide sequence encoding the purified Anopheles
CC gambiae olfaction polypeptide; or (b) a nucleotide sequence that
CC hybridises under stringent conditions to a hybridisation probe comprising

```
CC   a 1964, 1239, 1142, 1236, 1194, 1176, 474 or 1206 nucleotide sequence
CC   (see ABQ75102 to ABQ75105 and ABQ75110 to ABQ75113) (S2), or its
CC   complement; and (2) a method for identifying an agent that binds to
CC   mosquito olfaction molecules comprising: (a) providing an isolated
CC   mosquito olfaction molecule; (b) contacting a test agent with the
CC   isolated mosquito olfaction molecule; and (c) detecting specific binding
CC   of the test agent to the isolated mosquito olfaction molecule, where the
CC   presence of specific binding identifies the test agent as a mosquito
CC   olfaction-binding compound. The mosquito olfaction molecules are useful
CC   for mosquito management, i.e. controlling this pest and disease vector. A
CC   method from the present invention of screening for substances that
CC   modulate arrestin-odourant receptor interaction is useful for identifying
CC   pest control agents. The present sequence represents Anopheles gambiae
CC   odourant receptor 2 genomic DNA from the present invention. N.B. The
CC   features given in figure 4a are tentative and do not directly encode SEQ
CC   ID NO:6 (ABP52835)

PT   New mosquito arrestin 1 and 2 genes and polypeptides, useful for
PT   identifying mosquito olfaction molecule binding compounds which reduce
PT   the ability of mosquitoes to locate sources of bloodmeal, e.g. humans.
XX
PS   Disclosure; Fig 4a; 101pp; English.
XX
CC   The present sequence is that of genomic DNA encoding a novel mosquito
CC   olfaction molecule, odorant receptor 2. A cDNA sequence for odorant
CC   receptor 2 is given in ACF79719. The invention provides 9 novel mosquito
CC   polypeptides and the nucleic acids encoding them. These are odorant
CC   receptor molecules 1-7 and arrestins 1 and 2. The odorant receptors
CC   function in a ligand-induced signal transduction pathway for the
CC   activation of mosquito olfaction. Arrestin functions to inhibit the
CC   activated signal transduction cascade. Thus, the odorant receptors act as
CC   an 'on' switch, and arrestin as an 'off' switch for the odorant detection
CC   system of the mosquito. Methods are provided for identifying compounds
CC   that interfere with the operation of the mosquito olfactory system,
CC   particularly compounds that modulate arrestin 2 activity. These are
CC   useful for the control of mosquitoes, particularly by reducing their
CC   ability to locate sources of bloodmeal

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 15671; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT   Proteins encoded by chromosome 2 of the human malarial parasite,
PT   Plasmodium falciparum, useful as antimalarial vaccines and in the
PT   diagnosis of P.falciparum infection.
XX
PS   Disclosure; Page 460-462; 577pp; English.
XX
CC   The present invention describes proteins and their fragments (I) encoded
CC   by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
```

```
CC   Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC   vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC   (II) are useful for the development of vaccines against P. falciparum
CC   infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC   immunogens comprising the sequences of (I), are useful in the detection
CC   of infection with P. falciparum. Furthermore, (I) (especially when they
CC   are rifins or secreted or membrane proteins) can aid the identification
CC   of drugs to treat or prevent P. falciparum infection, or they can be used
CC   to identify drug resistance in P. falciparum. Sequencing of the
CC   Plasmodium chromosome 2 and the subsequent identification of proteins
CC   encoded by it will help to expand our understanding of parasite biology,
CC   a process hampered by the complexity of the parasitic lifecycle, and

PT   New isolated nucleic acid detection reagent for detecting 1000 or more
PT   genes from Drosophila and for elucidating cell signaling and cell-cell
PT   interactions.
XX
PS   Claim 1; SEQ ID NO 32984; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Proteins encoded by chromosome 2 of the human malarial parasite,
PT Plasmodium falciparum, useful as antimalarial vaccines and in the
PT diagnosis of P.falciparum infection.
XX
PS Disclosure; Page 504-506; 577pp; English.
XX
CC The present invention describes proteins and their fragments (I) encoded
CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC (II) are useful for the development of vaccines against P. falciparum
CC infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC immunogens comprising the sequences of (I), are useful in the detection
CC of infection with P. falciparum. Furthermore, (I) (especially when they
CC are rifins or secreted or membrane proteins) can aid the identification
CC of drugs to treat or prevent P. falciparum infection, or they can be used
CC to identify drug resistance in P. falciparum. Sequencing of the
CC Plasmodium chromosome 2 and the subsequent identification of proteins
CC encoded by it will help to expand our understanding of parasite biology,
CC a process hampered by the complexity of the parasitic lifecycle, and
CC provide new targets for vaccine and drug development. Parasite resistance
CC to drugs and mosquito resistance to insecticides have led to a resurgence
CC of malaria in many parts of the world, and there is a pressing need for
CC vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC represent nucleotide and protein sequences given in the present
CC invention, but which are not specifically mentioned within the
CC specification

PS claim 16; seqid 290; 310pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells(comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT stress, salt stress or osmotic stress.
XX
PS Claim 48; SEQ ID NO 14450; 89pp; English.
XX
CC The invention relates to novel abiotic stress responsive polynucleotides
CC and polypeptides. Also disclosed are vectors, expression cassettes, host
CC cells, and plants containing such polynucleotides. Also disclosed are
CC methods for using the polynucleotides and polypeptides to alter the
CC responsiveness of a plant to abiotic stress. The invention is useful in
CC agriculture. The nucleic acid is useful for determining whether a test
CC plant has been exposed to an abiotic stress condition. It is also useful
CC for selecting an agent that alters abiotic stress regulated
CC polynucleotide expression in a plant cell, and to identify a homolog or
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC molecule and the polypeptide encoded by it are useful in altering the
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC stress, osmotic stress or any of their combinations. The present sequence
CC is used in the exemplification of the invention

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

LOCUS       AE000693               14693 bp    DNA     linear   BCT 17-MAR-2003
DEFINITION  Aquifex aeolicus VF5 section 25 of 109 of the complete genome.
ACCESSION   AE000693 AE000657
VERSION     AE000693.1  GI:2983148
KEYWORDS    .
SOURCE      Aquifex aeolicus VF5
  ORGANISM  Aquifex aeolicus VF5
            Bacteria; Aquificae; Aquificales; Aquificaceae; Aquifex.
REFERENCE   1  (bases 1 to 14693)
  AUTHORS   Deckert,G., Warren,P.V., Gaasterland,T., Young,W.G., Lenox,A.L.,
            Graham,D.E., Overbeek,R., Snead,M.A., Keller,M., Aujay,M.,
            Huber,R., Feldman,R.A., Short,J.M., Olsen,G.J. and Swanson,R.V.
  TITLE     The complete genome of the hyperthermophilic bacterium Aquifex
            aeolicus
  JOURNAL   Nature 392 (6674), 353-358 (1998)
   PUBMED   9537320
REFERENCE   2  (bases 1 to 14693)
  AUTHORS   Deckert,G., Warren,P.V., Gaasterland,T., Young,W.G., Lenox,A.L.,
            Graham,D.E., Overbeek,R., Snead,M.A., Keller,M., Aujay,M.,
            Huber,R., Feldman,R.A., Short,J.M., Olson,G.J. and Swanson,R.V.
  TITLE     Direct Submission
  JOURNAL   Submitted (25-JUL-1997) Diversa Corporation, Genomics, San Diego,
            CA 92121
COMMENT     Putative indicates no similarity to known proteins
            Hypothetical indicates similarity to a protein of unknown function.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PT New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
PT preparing a vaccine composition against Klebsiella pneumoniae.
XX
PS Disclosure; SEQ ID NO 987; 932pp; English.
XX
CC The invention describes a new isolated nucleic acid encoding a Klebsiella
CC pneumoniae polypeptide. Also described are: a recombinant expression
CC vector comprising the nucleic acid, operably linked to a transcription
CC regulatory element; and a cell comprising the recombinant expression
CC vector. The nucleic acid is useful for preparing a vaccine composition
CC against Klebsiella pneumoniae. This sequence encodes a Klebsiella
CC pneumoniae polypeptide of the invention

PT Nucleotide specific for Shigella boydii 10 O-antigen useful for detecting
PT and identifying Shigella boydii 10 in human body and the environment.
XX
PS Claim 1; SEQ ID NO 1; 32pp; Chinese.
XX
CC The invention relates to a nucleotide specific for Shigella boydii 10 O-
CC antigen, which is the total nucleotide sequence of the gene cluster for
CC controlling the synthesis of O-antigens in Shigella boydii 10. The
CC present sequence represents the Shigella boydii 10 O-antigen gene
CC cluster.

PT   New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
PT   preparing a vaccine composition against Klebsiella pneumoniae.
XX
PS   Disclosure; SEQ ID NO 1153; 932pp; English.
XX
CC   The invention describes a new isolated nucleic acid encoding a Klebsiella
CC   pneumoniae polypeptide. Also described are: a recombinant expression
CC   vector comprising the nucleic acid, operably linked to a transcription
CC   regulatory element; and a cell comprising the recombinant expression
CC   vector. The nucleic acid is useful for preparing a vaccine composition
CC   against Klebsiella pneumoniae. This sequence encodes a Klebsiella
CC   pneumoniae polypeptide of the invention

PT   Nucleotide peculiar to O-antigen of Escherichia coli O43.
XX
PS   Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC   The invention relates to a nucleotide sequence (SEQ ID No:1) which is
CC   specific to the O-antigen of Escherichia coli O43. The nucleotide
CC   sequence represents the complete sequence (14309bp) of a gene cluster for
CC   controlling the synthesis of O-antigen in Escherichia coli O43. The
CC   nucleotide sequence can have one or several inserted, deleted or
CC   substituted bases, whilst still retaining its function. Also described is
CC   a PCR primer for the glycosyltransferase (galF) gene and a PCR primer for
CC   the oligosaccharide unit treatment (gnd) gene, both of which are
CC   contained within the E. coli type O43 O-antigen gene cluster. The
CC   invention also discloses a method for detecting and identifying E. coli
CC   type O43 in humans. This sequence represents the E. coli type O43 O-
CC   antigen gene cluster of the invention.

XX
CC The present invention relates to virulence genes of Yersinia species and
CC proteins encoded by such genes. Sequences of the invention are useful in
CC the manufacture of a medicament for treating or preventing a condition
CC associated with infection by Yersinia e.g. tuberculosis particularly in
CC veterinary treatment. They are useful in screening assays for identifying
CC antimicrobial drugs. They are also used to prepare vaccines. The present
CC sequence is Yersinia pestis mutant O-antigen polymerase gene

PT pathological conditions resulting from bacterial infection.
XX
PS Disclosure; SEQ ID NO 2472; 455pp; English.
XX
CC The invention relates to Pseudomonas aeruginosa polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biochip technology. Sequences ABD01397-
CC ABD17967 represent P. aeruginosa polynucleotides of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html

PT Nucleotide specific to Ogawa of colibacillus 0-59 for detecting and
PT identifying colibacillus 059 in human body and in environment.
XX
PS Claim 1; SEQ ID NO 1; 31pp; Chinese.
XX
CC The invention relates to a nucleotide sequence of a gene cluster which
CC controls the synthesis of Ogawa in colibacillus 059. Also claimed are
CC oligonucleotides of glycosyltransferase gene and oligosaccharide unit
CC processing gene in Ogawa gene cluster originated from colibacillus 059.
CC The oligonucleotide is useful for detecting and identifying colibacillus
CC 059 in human body and in environment. The present sequence represents the
CC Ogawa gene cluster.

PT New purified and isolated DNA sequence having protein production
PT increasing activity comprises a bent DNA element and a binding site for a
PT DNA binding protein, useful for increasing protein production activity in
PT eukaryotic host cell.
XX
PS Disclosure; SEQ ID NO 132; 282pp; English.
XX
CC The invention relates to a purified and isolated DNA sequence having
CC protein production increasing activity comprising at least one bent DNA
CC element, and at least one binding site for a DNA binding protein. The
CC purified and isolated DNA sequence comprising a first and a second
CC isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC MAR nucleotide sequence selected from a purified and isolated DNA
CC sequence above, a purified and isolated MAR DNA above, a purified and
CC isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC sequence complementary to it, its molecular chimera, or its combinations
CC and variants, is useful for increasing protein production activity in a
CC eukaryotic host cell. The present sequence represents a human chromosome
CC 2 contig DNA.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
```

PT samples.
XX
PS Claim 9; Fig 10; 165pp; English.
XX
CC This is the nucleotide sequence of a gene cluster involved in the
CC biosynthesis of the Salmonella enterica serotype B (strain LT2) O
CC antigen. 16 Open reading frames within the gene cluster were identified
CC on the basis of homology to known sequences. The genes encode proteins
CC (see AAW88335-50) involved the synthesis of sugars present in the
CC polysaccharide antigen, and in the transport or processing of
CC polysaccharide or oligosaccharide units. The use of nucleic acid
CC molecules derived from assembly and transport genes, particularly wbd
CC (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC antigen gene clusters improves the specificity of methods for the
CC detection and identification of O antigens, e.g. in testing food- or
CC faecal-derived samples, or samples from patients. The O antigen is a
CC major virulence factor of S. enterica

PT Oligonucleotide for diagnosis and therapy of diseases associated with
PT signal transduction e.g. cancer, comprises chemically modified genomic
PT sequences of genes associated with signal transduction.
XX
PS Claim 1; SEQ ID NO 357; 24pp; English.
XX
CC The present invention relates to chemically modified DNA sequences of
CC signal transduction associated genes. The DNA sequences are chemically
CC modified using a solution of bisulphite, hydrogen sulphite or disulphite.
CC Also disclosed are oligonucleotides and/or PNA oligomers for detecting
CC the cytosine methylation state (CpG islands) of these genes, and a method
CC for the diagnosis and/or therapy of genetic and epigenetic parameters of
CC genes associated with signal transduction. The genomic DNA can be
CC obtained from cells or cellular components which contain DNA, e.g. cell
CC lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
CC tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
CC brain, heart, prostate, lung, breast or liver, histologic object slides,
CC and all their possible combinations. The sequences of the invention are
CC useful for the diagnosis and therapy of diseases associated with signal
CC transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
CC chemically pretreated genomic DNA sequences of different genes associated
CC with signal transduction, or their complementary sequences. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the
CC European Patent Office

XX
CC The present sequence is an eps operon from Streptococcus thermophilus.
CC Proteins encoded by the eps operon function in exopolysaccharide (EPS)
CC synthesis. The operon is useful for producing chimeric eps operons, for
CC optimising production of EPS in lactic acid bacteria. EPS impart texture,
CC mouth feel and rheological properties to fermented food products (e.g.
CC yoghurt). They function as thickeners, to provide free-flowing and creamy
CC texture, and may also have biological activities beneficial to health

XX
CC The invention relates to a purified and isolated DNA sequence having
CC protein production increasing activity comprising at least one bent DNA
CC element, and at least one binding site for a DNA binding protein. The
CC purified and isolated DNA sequence comprising a first and a second
CC isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC MAR nucleotide sequence selected from a purified and isolated DNA
CC sequence above, a purified and isolated MAR DNA above, a purified and
CC isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC sequence complementary to it, its molecular chimera, or its combinations
CC and variants, is useful for increasing protein production activity in a
CC eukaryotic host cell. The present sequence represents a human chromosome
CC 2 contig DNA.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
```

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     This GSS is part of a random genomic sequencing program of thirteen
            yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
            exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
            Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
            lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
            angusta, Debaryomyces hansenii var.  hansenii, Pichia sorbitophila,
            Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
            5 kb were prepared and both extremities were sequenced. See
            keywords for description of this sequence and for the sequence of
            the other extremity of this insert.

  JOURNAL   Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 4
AF104912
LOCUS       AF104912               16332 bp    DNA     linear   BCT 02-JAN-2001
DEFINITION  Escherichia coli K30 capsule biosynthesis cluster, partial
            sequence.
ACCESSION   AF104912
VERSION     AF104912.2  GI:8469170
KEYWORDS    .
SOURCE      Escherichia coli
  ORGANISM  Escherichia coli
            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
            Enterobacteriaceae; Escherichia.
REFERENCE   1  (bases 1 to 16332)
  AUTHORS   Drummelsmith,J. and Whitfield,C.
  TITLE     Gene products required for surface expression of the capsular form
            of the group 1 K antigen in Escherichia coli (O9a:K30)
  JOURNAL   Mol. Microbiol. 31 (5), 1321-1332 (1999)
   PUBMED   10200954
REFERENCE   2  (bases 1 to 16332)
  AUTHORS   Drummelsmith,J. and Whitfield,C.
  TITLE     Direct Submission
  JOURNAL   Submitted (07-NOV-1998) Microbiology, University of Guelph, Guelph,
            ON N1G2W1, Canada
REFERENCE   3  (bases 1 to 16332)
  AUTHORS   Drummelsmith,J. and Whitfield,C.
  TITLE     Direct Submission
  JOURNAL   Submitted (12-JUN-2000) Microbiology, University of Guelph, Guelph,
            ON N1G2W1, Canada
  REMARK    Sequence update by submitter
COMMENT     On Jun 12, 2000 this sequence version replaced gi:4512003.

RESULT 11
AE008357/c
LOCUS       AE008357               11355 bp    DNA     linear   BCT 28-MAY-2004
DEFINITION  Agrobacterium tumefaciens str. C58 linear chromosome, section 161
            of 187 of the complete sequence.
ACCESSION   AE008357 AE007870
VERSION     AE008357.1  GI:15160112
KEYWORDS    .
SOURCE      Agrobacterium tumefaciens str. C58
  ORGANISM  Agrobacterium tumefaciens str. C58
            Bacteria; Proteobacteria; Alphaproteobacteria; Rhizobiales;
            Rhizobiaceae; Agrobacterium.
REFERENCE   1  (bases 1 to 11355)
  AUTHORS   Hinkle,G., Slater,S.C. and Goodner,B.
  TITLE     Complete Genome Sequence of Agrobacterium tumefaciens C58
            (Rhizobium radiobacter C58), the Causative Agent of Crown Gall
            Disease in Plants
  JOURNAL   Unpublished
REFERENCE   2  (bases 1 to 11355)
  AUTHORS   Hinkle,G., Slater,S.C. and Goodner,B.
  TITLE     Direct Submission
  JOURNAL   Submitted (14-AUG-2001) Bioinformatics, Cereon Genomics, 45 Sidney
            Street, Cambridge, MA 02139, USA
COMMENT     Approximately 800 bp of telomeric sequence missing from the left
            end of the chromosome and 200 bp missing from the right end.
FEATURES             Location/Qualifiers

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PS Disclosure; SEQ ID NO 999; 932pp; English.
XX
CC The invention describes a new isolated nucleic acid encoding a Klebsiella
CC pneumoniae polypeptide. Also described are: a recombinant expression
CC vector comprising the nucleic acid, operably linked to a transcription
CC regulatory element; and a cell comprising the recombinant expression
CC vector. The nucleic acid is useful for preparing a vaccine composition
CC against Klebsiella pneumoniae. This sequence encodes a Klebsiella
CC pneumoniae polypeptide of the invention

CC The invention relates to novel abiotic stress responsive polynucleotides
CC and polypeptides. Also disclosed are vectors, expression cassettes, host
CC cells, and plants containing such polynucleotides. Also disclosed are
CC methods for using the polynucleotides and polypeptides to alter the
CC responsiveness of a plant to abiotic stress. The invention is useful in
CC agriculture. The nucleic acid is useful for determining whether a test
CC plant has been exposed to an abiotic stress condition. It is also useful
CC for selecting an agent that alters abiotic stress regulated
CC polynucleotide expression in a plant cell, and to identify a homolog or
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC molecule and the polypeptide encoded by it are useful in altering the
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC stress, osmotic stress or any of their combinations. The present sequence
CC is used in the exemplification of the invention

PT   New organisms containing nucleic acid encoding a growth hormone fragment
PT   which modulates lipid metabolism are useful to produce dietary aids for
PT   obesity and in the meat production industry.
XX
PS   Disclosure; Page 48-50; 54pp; English.
XX
CC   The invention relates to novel transgenic organisms useful in the
CC   production of functional food and drink products for the treatment or
CC   prevention of obesity via the regulation of lipid metabolism. The
CC   organisms comprise a polynucleotide encoding a growth hormone fragment
CC   capable of stimulating the activity of hormone-sensitive lipase (the key
CC   enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key
CC   enzyme in lipogenesis). The growth hormone fragment preferably contains
CC   at least the disulphide-bonded loop of a mammalian growth hormone (but is
CC   not the full-length growth hormone) and is optionally linked to an
CC   epitope tag or heterologous fusion protein partner. The transgenic
CC   organism may be a microorganism used to produce a fermented product
CC   (e.g., yeast), or an edible plant or animal or cell thereof. Food or
CC   drink made using methods of the invention are used to modify fat/lean
CC   ratio, lipid metabolism or food use in a mammal. In particular, the food
CC   or drink products may be used to treat or prevent obesity, particularly
CC   in humans, and may also be used to improve the fat/lean ration of
CC   livestock raised for meat production. In the exemplification of the
CC   invention, the human growth hormone (hGH) fragment analogue AOD9604 was
CC   expressed in yeast, optionally fused to the FLAG epitope (AAB73625). The
CC   present sequence is described as a DNA sequence from yeast in the
CC   sequence listing, but is not further referred to in the specification

XX
CC   The invention relates to diseases-associated genes and polypeptides
CC   encoded by these genes. The invention also relates to methods for
CC   analysing gene expression patterns and methods for diagnosing, treating
CC   or preventing disease. The invention is useful for analysing gene
CC   expression. It is also useful for identifying biomolecules such as
CC   polynucleotides or polypeptides useful in the diagnosis, prognosis,
CC   treatment, prevention and evaluation of therapies for diseases such as
CC   cancer. The present sequence is human UDP-glucoronosyl transferase (UGT)
CC   gene. This sequence is used to illustrate the method of the invention.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 27184; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at

PT   New human enzyme (ENZM) polypeptide, useful for preparing a composition
PT   for treating a disease associated with decreased expression or
PT   overexpression of ENZM e.g. cancer.
XX
PS   Claim 5; Page 334-335; 264pp; English.
XX
CC   The invention relates to human enzyme (ENZM) polypeptides and their
CC   corresponding polynucleotides. ENZM sequences are useful for preparing a
CC   composition for diagnosing or treating a disease or condition associated
CC   with decreased expression or overexpression of functional ENZM. The
CC   disorders include immune disorders (anaemia, allergy or asthma),
CC   infectious disorders (viral, fungal, parasitic or protozoal infection),
CC   immune deficiencies (acquired immune deficiency syndrome; AIDS),
CC   metabolic disorder (Addison's disease, diabetes or goitre), reproductive
CC   disorders (infertility or impotence), cardiovascular disorders
CC   (atherosclerosis or myocardial infarction), eye disorders and cell
CC   proliferative disorders (cancer). ENZM DNA is useful in gene therapy. The
CC   present sequence is human ENZM cDNA

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
```

project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

                     /note="Organ: brain; Vector: pBluescript II KS(+); Site_1:
                     EcoRI; Site_2: Not1; This normalized library was
                     constructed from 1 million independent clones. cDNA
                     synthesis was initiated using an oligo(dT) primer, using
                     methylated C in the first strand synthesis reaction.
                     Following this first strand reaction, double-stranded cDNA
                     was blunted, ligated to NotI adapters, digested with
                     EcoRI, size-selected, and cloned into the NotI and EcoRI
                     compatible sites of a custom modified MCS of the
                     pBluescript (KS+) vector. The library was normalized in 2
                     rounds using conditions adapted from Soares et al., PNAS
                     (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
                     (1996): 791, except that a significantly longer
                     reannealing hybridization was used."

  TITLE     Direct Submission
  JOURNAL   Submitted (02-JUN-1999) Genoscopé - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

  TITLE     Direct Submission
  JOURNAL   Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     -------------- Genome Center
                Center: Baylor College of Medicine
```

```
            Center code: BCM
            Web site: http://www.hgsc.bcm.tmc.edu/
            Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
            Center project name: LBOF
            Center clone name: CH250-267D17
          -------------- Summary Statistics
            Chemistry: Dye-primer Bodipy: inf% of reads
            Chemistry: Dye-terminator Big Dye: inf% of reads
            Consensus quality: 9313 bases at least Q40
            Consensus quality: 10835 bases at least Q30
            Consensus quality: 12380 bases at least Q20
          --------------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
          * NOTE: The contigs are based on the application
          * of the PGI method using the Human genome (NCBI build 31)
          * as the comparative genome.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 1 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *       1    83313: contig of 83313 bp in length.

TITLE Direct Submission
JOURNAL Submitted (04-MAR-2003) Genome Analysis, Institute of Molecular Biotechnology, Beutenberstr. 11, Jena 07745, Germany
REFERENCE 4 (bases 1 to 331039)
AUTHORS Baumgart,C.
TITLE Direct Submission
JOURNAL Submitted (12-MAR-2003) Genome Analysis, Institute of Molecular Biotechnology, Beutenberstr. 11, Jena 07745, Germany
REFERENCE 5 (bases 1 to 331039)
AUTHORS Baumgart,C.
TITLE Direct Submission
JOURNAL Submitted (21-FEB-2004) Genome Analysis, Institute of Molecular Biotechnology, Beutenberstr. 11, Jena 07745, Germany
COMMENT On Feb 21, 2004 this sequence version replaced gi:28829703.
CDS predictions from GeneID do not necessarily reflect true genes.
Further Information is available from IMB Jena, Department of Genome Analysis
(http://genome.imb-jena.de/dictyostelium/)
and the Univerity Colonge, Institute for Biochemistry I
(http://www.uni-koeln.de/dictyostelium/project.shtml
Funding
Agency : Deutsche Forschungsgemeinschaft (DFG).

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PT Polynucleotide specific for Escherichia coli 0156 O-antigen.
XX
PS Claim 1; SEQ ID NO 1; 31pp; Chinese.
XX
CC The invention provides a polynucleotide specific for the Escherichia coli
CC 0156 O-antigen, which is the total nucleotide sequence of the gene
CC cluster for controlling the synthesis of O-antigens in E. coli 0156. It
CC includes the glycosyl transferase genes and oligosaccharide unit
CC treatment genes in the O-antigen gene cluster originated from E. coli
CC 0156. The invention includes detecting and identifying E. coli 0156 in
CC the human body and in the environment (e.g. by PCR). The current sequence
CC represents the E. coli O156 O-antigen sequence.

PT   O-antigen specific nucleotide of E. coli 081 type.
XX
PS   Claim 1; SEQ ID NO 1; 29pp; Chinese.
XX
CC   The invention relates to the O-antigen biosynthetic gene cluster of
CC   Escherichia coli O81 (AEA88828) and to variants thereof. The O-antigen of
CC   E. coli O81 is a lipopolysaccharide antigen. The invention also relates
CC   to PCR primers (AEA88829-AEA88830) for the amplification of the gnd gene
CC   of the O-antigen gene cluster, oligonucleotides derived from the
CC   glycosyltransferase and oligose unit processing genes of the O-antigen
CC   gene cluster, and a method for detecting E. coli O81 in the environment
CC   and in the human body using oligonucleotides of the invention. The
CC   present sequence represents the specifically claimed sequence of the E.
CC   coli O81 O-antigen biosynthetic gene cluster.

XX
PS   Claim 1; SEQ ID NO 440; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
```

CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT New nucleic acid, oligonucleotides and peptide nucleic acid-oligomers,
PT useful for detecting cytosine methylation state of genes associated with
PT pharmacogenomics and for therapy of diseases e.g. cancer.
XX
PS Claim 1; SEQ ID NO 115; 24pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence at least 18
CC bases in length of a segment of the chemically pretreated DNA of genes
CC associated with pharmacogenomics according to one of the sequences of the
CC genes ALDH6 (NM_000693), CYP11A (NM_000781), CYP11B1 (NM_000497), CYP3A3
CC (NM_000776 and NM_017460), DPYD (NM_000110), EPHX2 (NM_001979), OCLN
CC (NM_002538), TXNRD1 (NM_003330), UGT8 (NM_003360), MRP (NM_004996,
CC NM_019900, NM_019901, NM_019902, NM_019862, NM_019898, NM_019899) and
CC their complementary sequences, or a sequence (S1) chosen from 87
CC sequences and their complements. The chemical pretreatment is bisulphite
CC treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC Also included are an oligomer (II) in particular an oligonucleotide or a
CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC base sequence having a length of 9 nucleotides which hybridises to or is
CC identical to a chemically pretreated DNA of genes associated with
CC pharmacogenomics and their complements, arranged in an array for
CC analysing diseases associated with the methylation state (CpG) and/or
CC detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC and their complements is useful for diagnosis and therapy of solid
CC tumours and cancer. The present sequence represents one the 87 DNA
CC sequences or its complement. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Novel recombinant entomopox virus vector useful for delivering
PT   polynucleotide encoding protein to vertebrate cell, comprises
PT   polynucleotide encoding protein operably linked with heterologous
PT   promoter sequence.
XX
PS   Disclosure; Page 226-242; 326pp; English.
XX
CC   The invention relates to a recombinant entomopox virus (EPV) vector,
CC   comprising a polynucleotide encoding a protein operably linked with a
CC   heterologous promoter sequence. The invention also concerns methods for
CC   providing gene therapy for genetic deficiency disorders. Vectors of the
CC   invention are useful for delivering a polynucleotide encoding a protein
CC   to a vertebrate cell preferably a mammalian cell, such as a human cell.
CC   The vector is introduced into the vertebrate cell by infection in a viral
CC   particle, or by transfection, transduction, or injection either in vitro
CC   or in vivo. The vector is useful for the delivery and expression of
CC   biologically useful proteins in gene therapy protocols, and for
CC   delivering large DNA segments for engineering of vertebrate cells.
CC   Polynucleotides of the invention have applications in techniques such as
CC   their use as insertion sites for foreign genes of interest, hybridisation
CC   probes, for chromosome and gene mapping, in PCR technologies, and in the
CC   production of sense or antisense nucleic acids. Vectors of the invention
```

```
CC   provide for stable integration and expression of heterologous DNA in host
CC   cells, and are adapted for accepting large heterologous polynucleotide
CC   inserts which can be delivered in an infected or transformed cell and
CC   expressed in a stable fraction. The current sequence represents a
CC   fragment of the genome of the genus B entomopoxvirus from amsacta moorei

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 14450; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT Identifying at least one gene involved in plant resistance or response to
PT pathogenic infection for conferring resistance or tolerance to a plant to
PT bacterial, fungal or viral infection by determining or detecting plant
PT gene expression.
XX
PS Claim 27; SEQ ID NO 5263; 899pp; English.
XX
CC The present invention relates to a method (M1) for identifying genes
CC involved in plant resistance or response to pathogenic infection. M1
CC comprises identifying a gene whose expression is significantly altered in
CC the incompatible interaction of plant gene expression relative to
CC expression of the gene in an uninfected plant, in a mutant plant that
CC does not express a gene associated with response to pathogenic infection,
CC or in a corresponding incompatible or compatible interaction. (M1) is
CC useful for conferring resistance to resistance or tolerance to a plant to
CC bacterial, fungal or viral infection. The present sequence was used to
CC illustrate the invention.

PT New purified and isolated DNA sequence having protein production
PT increasing activity comprises a bent DNA element and a binding site for a
PT DNA binding protein, useful for increasing protein production activity in
PT eukaryotic host cell.
XX
PS Disclosure; SEQ ID NO 146; 282pp; English.
XX
CC The invention relates to a purified and isolated DNA sequence having
CC protein production increasing activity comprising at least one bent DNA
CC element, and at least one binding site for a DNA binding protein. The
CC purified and isolated DNA sequence comprising a first and a second
CC isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC MAR nucleotide sequence selected from a purified and isolated DNA
CC sequence above, a purified and isolated MAR DNA above, a purified and
CC isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC sequence complementary to it, its molecular chimera, or its combinations
CC and variants, is useful for increasing protein production activity in a
CC eukaryotic host cell. The present sequence represents a human chromosome
CC 2 contig DNA.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT   This GSS is part of a random genomic sequencing program of thirteen
          yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
          exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
          Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
          lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
          angusta, Debaryomyces hansenii var.  hansenii, Pichia sorbitophila,
          Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
          5 kb were prepared and both extremities were sequenced. See
          keywords for description of this sequence and for the sequence of
          the other extremity of this insert.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     On Apr 30, 2005 this sequence version replaced gi:62751002.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml
            CH211-195J11 is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1.

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep
            Clone-derived Zebrafish pUC subclones occasionally display
            inconsistency over the length of mononucleotide A/T runs and
            conserved TA repeats. Where this is found the longest good quality
            representation will be submitted.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply.
            DKEY-287G19 is from a Zebrafish BAC library

           --------------.
           * NOTE: This is a 'working draft' sequence. It currently
           * consists of 6 contigs. The true order of the pieces
           * is not known and their order in this sequence record is
           * arbitrary. Gaps between the contigs are represented as
           * runs of N, but the exact sizes of the gaps are unknown.
           * This record will be updated with the finished sequence
           * as soon as it is available and the accession number will
           * be preserved.
           *        1    10134: contig of 10134 bp in length
           *    10135    10234: gap of 100 bp
           *    10235   111588: contig of 101354 bp in length
           *   111589   111688: gap of 100 bp
           *   111689   123934: contig of 12246 bp in length
           *   123935   124034: gap of 100 bp
           *   124035   133984: contig of 9950 bp in length
           *   133985   134084: gap of 100 bp
           *   134085   149579: contig of 15495 bp in length
           *   149580   149679: gap of 100 bp
           *   149680   155885: contig of 6206 bp in length.

COMMENT     On Jun 14, 2005 this sequence version replaced gi:62868301.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
```

```
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply. CH211-113K9 is from a CHORI-211
            BAC library
            VECTOR: pTARBAC2.1.

JOURNAL Submitted (08-JUN-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: zfish-help@sanger.ac.uk Clone requests: http://www.sanger.ac.uk/Projects/D_rerio/faqs.shtml#dataeight
COMMENT On Jun 10, 2005 this sequence version replaced gi:52000376.
---------- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: zfish-help@sanger.ac.uk
---------- Project Information
Center project name: zK261I18
---------- Summary Statistics
Assembly program: XGAP4; version 4.5
Chemistry: Dye-terminator; 100% of reads
Consensus quality: 200681 bases at least Q40
Consensus quality: 201061 bases at least Q30
Consensus quality: 201450 bases at least Q20
Insert size: 201908; sum-of-contigs
Insert size: 207763; 0.9% error; agarose-fp
Quality coverage: 6.20x in Q20 bases; sum-of-contigs Quality coverage: 6.02x in Q20 bases; agarose-fp
----------.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 159147: contig of 159147 bp in length
* 159148 159247: gap of 100 bp
* 159248 163227: contig of 3980 bp in length
* 163228 163327: gap of 100 bp
* 163328 168724: contig of 5397 bp in length
* 168725 168824: gap of 100 bp
* 168825 202208: contig of 33384 bp in length.

COMMENT     On Feb 1, 2002 this sequence version replaced gi:17977471.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0338B23
                Drafting Center: WIBR
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-631I21, 2000 bp overlap;
            the clone sequenced to the right is RP11-660B13, 2000 bp overlap.
            Actual start of this clone is at base position 161305 of
            RP11-631I21; actual end is at base position 181792 of RP11-338B23.

            There is a region covered by PCR only from 20829 to 20858.  There
            is a simple-sequence repeat from 83554 to 85256.

            The sequence of AC025095 has been incorporated into AC098822.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 14450; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT methylation.
XX
PS Claim 1; SEQ ID NO 227; 32pp + Sequence Listing; German.
XX
CC The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

PT Detecting and differentiating between colon cell proliferative disorders
PT associated with a gene or its regulatory regions comprises contacting a
PT target nucleic acid in a biological sample obtained from the subject with
PT a reagent.
XX
PS Claim 32; SEQ ID NO 174; 74pp; English.
XX
CC The invention relates to a novel method for detecting and differentiating
CC between colon cell proliferative disorders associated with at least one
CC gene or its regulatory regions. The method comprises contacting a target
CC nucleic acid in a biological sample obtained from the subject with at
CC least one reagent or a series of reagents, where the reagent or series of
CC reagents, distinguishes between methylated and non methylated CpG
CC dinucleotides within the target nucleic acid. The molecules of the
CC invention demonstrate cytostatic activity whilst the method may useful
CC for detecting and differentiating between colon cell proliferative
CC disorders, including cancers such as colon adenoma and colon carcinoma.
CC The PNA (peptide nucleic acid)-oligomers are useful as probes for
CC determining cytosine methylation state or single nucleotide
CC polymorphisms. The current sequence is that of the pretreated genomic DNA
CC region of the invention. This sequence is not shown within the
CC specification but is taken from Wipoweb.
